\* Regarding Claims 1 - 4

The wave form information library is Reference 1 is a library for static analysis has information termed "information indicating what type of delay-value waveform is obtained as the output signal when a certain type of input waveform is applied as the input signal" (corresponding to the "delay analysis" in this invention) and (corresponding to the "logical operation information" in this invention) "what delay times in the output signals are there relating to the input signals?"

When calculating the delays, the technology described in References 2 and 3 uses the input signals, the output signals, and the delay time when performing the delay calculation.

The technology described in Reference 4 has delay time information pertaining to the combination of the nominal rising edges and falling edges at the input terminals of the circuit and the rising edges and falling edges at the output terminals.

The effects of the invention in Claims 1 through 4 of this application are such that they can be expected by a person skilled in the art from that which is found in References 1 through 4.
